

LEGIONELLA

CONTAMINATION? Inhalation of water mist contaminated with the bacteria

CONSEQUENCES? Worst case, chronic lung disease that can have serious to fatal consequences

DANGER ZONES? Poorly maintained water systems.
Wet cooling towers are a major risk group.

WHEN IS A COOLING TOWER A DANGER?

Temperatures
between 25-50°C

Formation
of biological
contamination

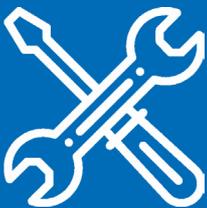

Formation of
inorganic deposits

Corrosion

Stagnating water

A cooling tower in poor condition is 50 times more likely to cause contamination! Maintenance is crucial!

SOLUTION?

Almecco's 100% legionella-free cooling tower!
Or request assistance from Almecco and PCA for
maintenance and water treatment.
